

FOOD RECALL ALERTS

Who wants metal sprinkles for breakfast?

SMALL. DANGEROUS. COSTLY.

In 2019, 25% of food recalls were because of plastic or metal debris being found in the finished product.* Fortunately, with the right expert advice, you can eliminate the risk to consumers' health and avoid:

- **Reputational damage to your brand** which can be disastrous and long-lasting
- **Spiralling costs** from collection and re-supply, to manufacturing disruption, to full press coverage notifying the public
- **Service failure**
- **Legal costs and disputes** throughout the supply chain
- **Punitive actions by regulatory authorities** including production closures during investigations
